

Chloride's ONEAC brand advantage: Your lowest cost of ownership

ONEAC brand batteries have a longer life

A typical battery life is 1.5 to 2 years. Compare that to a typical ONEAC brand UPS battery life of 3.5 years or longer.

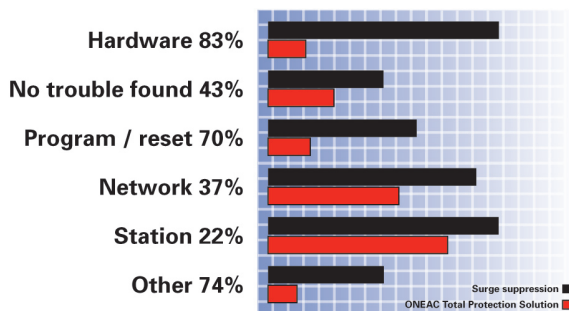

The design of the ONEAC UPS system utilizes an isolation transformer, reducing the number of times the UPS switches to battery power. This design increases the life of the battery and will save you the cost of frequent battery replacements.

Chloride also takes steps to ensure you have the strongest battery possible—choosing premium rated batteries, continuous charging, and testing before shipping are a few of these measures.

ONEAC brand systems reduce service calls and downtime

The average service call costs a minimum of \$100 - \$150 each, not including returning the electronic equipment

Field study results compiled over ten years show a reduction in a variety of service calls when using a Total Protection Solution.

Service calls can be expensive, but a service call does not include the cost of downtime. Revenue loss, corrupt data, lost time, lost customer satisfaction all affect the bottom line. According to a survey by the Yankee Group, over 50% of corporations researched put downtime costs associated with system outages at upwards of \$2000 per hour. How much does your downtime cost you?

ONEAC brand UPS systems will typically last over ten years

ONEAC brand UPS systems are warranted for five years (batteries for two years). However, the average life span of the UPS is ten years. Other UPS systems last two years and then the unit is thrown away when the battery dies.

The Chloride ONEAC difference

Because ONEAC brand systems are designed for premium performance, you see immediate results:

- Reduced cost of service calls
- Reduced cost of downtime
- Reduced cost of battery and UPS replacements
- Optimized performance of your system
- Increase customer satisfaction
