

Background

For nearly 35 years, Fromagerie restaurant has been a landmark in Rumson, New Jersey. In 2006, noted restaurateur, chef and cook book author, David Burke, took ownership of the restaurant. Now operating as David Burke Fromagerie, it is hailed by the New York Times as “an abundance of upscale deliciousness.” The four stars routinely awarded to the restaurant’s food could also describe its power protection provided by ONEAC AC Power business of Emerson Network Power.

POS system escapes harm

Around 9:30pm on New Years Eve 2008, the David Burke Fromagerie experienced a power outage due to an overloaded transformer nearby. When the local electric company was called to repair the problem, they sent a power surge or 'white out' through the building, nearly damaging all of the electrical equipment inside.

Fortunately, the restaurant had ONEAC ONEPlus UPS units installed on their point of sale systems. The power protection provided by ONEAC AC Power saved the units from being destroyed. Louie Oliveira, Director of Service for the POS manufacturer, admits "Without ONEAC protection it would have cost the customer anywhere from \$7,000 - \$12,000 to replace the POS equipment in this facility."

“Without ONEAC protection it would have cost us anywhere from \$7,000 - \$12,000 to replace the POS equipment in this facility.”

Louie Oliveira
Director of Service
for Retail System Manufacturer

Site equipment that was not protected by ONEAC brand UPS systems was burnt and left un-repairable. Harmful consequences, such as the loss of valuable equipment or the cost suffered when businesses are forced to close, were avoided because ONEAC power protection solutions were in place.

“We had been battling constant power issues prior to having the ONEAC UPSs installed. Since then, the issues ceased immediately,” says Oliveira. “This site was a perfect example of how bad power can not only disrupt your equipment from performing at its best; but as time goes on, it will deteriorate the electronic components that make up your POS system.”
