

Power Protection for E911 Installations

Communications

Benefits of Clean Power

- Maximizes network performance
- Eliminates unexplained system shutdowns
- Lengthens equipment life by eliminating destruction caused by power disturbances
- Stabilizes network communication
- Assures accurate call processing
- Cuts system interruptions and downtime
- Decreases service calls

Your E911 installation has to be reliable 100% of the time, even when your facility has power problems. With each advancement in today's technology, microprocessors become more sensitive to power disturbances, leaving your installation vulnerable. Disturbances from both inside and outside a facility significantly impact your system's performance and reliability.

ONEAC Total Protection Solutions meet the demanding needs for today's sensitive E911 equipment, preventing downtime from occurring. Delivering both power and telecommunication line protection, the Total Protection Solution eliminates all forms of electrical disturbances that can disrupt or damage your system. It's a level of protection that others simply can't match.

ONEAC's Total Protection Solution for Your E911 Installation

By protecting all pathways to your equipment—both power and telecommunications lines, ONEAC's Total Protection Solution assures increased reliability with fewer interruptions and downtime.

- Power Protection with ONEAC Power Conditioned UPSs
- Voice and Data Line Protection with ONEAC Convergent, OnLine, and Sentinel Series
- Proper grounding to a single point ground reference
- Ongoing maintenance

Choosing the Right Power Partner

Be sure the power protection company offers you:

- on site evaluations to determine your power quality issue as part of the relationship.
- test equipment to the field or evaluation units.
- several options based on the level of risk.
- training for your operations and service organization.
- services for all of its products with a 24/7 helpdesk.
- experience in understanding all the nuances of power protection.

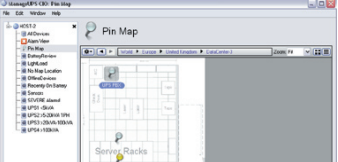

Any compromise in protection can seriously affect your voice, data, and video transmissions. ONEAC protection keeps your E911 Installation running strong.

EMERSON[™]
Network Power

Protecting your investment with ONEAC's Total Protection Solution

Your E911 Installation or PSAP can experience power disturbances at any point in the system. Be sure you are protecting your entire installation from the harmful effects of power disturbances and choosing the right level of protection for your level of risk. By implementing an ONEAC Total Protection Solution you protect all paths from electrical disturbances and eliminate their threat to your system.
